

Product no **AS14 2771****SAG12 | Senescence-specific cysteine protease SAG12****Product information**

<b>Immunogen</b>	KLH-conjugated peptide derived from <i>Arabidopsis thaliana</i> SAG12 protein sequence, UniProt:Q38886, TAIR: AT5G45890
<b>Host</b>	Rabbit
<b>Clonality</b>	Polyclonal
<b>Purity</b>	Immunogen affinity purified serum in PBS pH 7.4.
<b>Format</b>	Lyophilized
<b>Quantity</b>	50 µg
<b>Reconstitution</b>	For reconstitution add 50 µl of sterile water
<b>Storage</b>	Store lyophilized/reconstituted at -20°C; once reconstituted make aliquots to avoid repeated freeze-thaw cycles. Please remember to spin the tubes briefly prior to opening them to avoid any losses that might occur from material adhering to the cap or sides of the tube.

**Application information**

<b>Recommended dilution</b>	1 : 2000 (WB)
<b>Expected   apparent MW</b>	38   28 kDa
<b>Confirmed reactivity</b>	<i>Arabidopsis thaliana</i> , <i>Brassica napus</i> , <i>Hordeum vulgare</i>
<b>Predicted reactivity</b>	<i>Actinidia deliciosa</i> , <i>Brassica rapa</i> , <i>Gossypium hirsutum</i> , <i>Petunia hybrida</i> , <i>Morus notabilis</i> , <i>Nicotiana tabacum</i> , <i>Petunia hybrida</i> , <i>Populus trichocarpa</i> , <i>Ricinus communis</i> , <i>Theobroma cacao</i> Species of your interest not listed? <a href="#">Contact us</a>
<b>Not reactive in</b>	<i>Citrus sinensis</i>
<b>Additional information</b>	Recommended plant extraction buffer: See <a href="#">Durian</a> et al. (2019). Denature in Laemmli-sample buffer (final concentrations: 5% (v/v) beta-mercaptoethanol, 69 mM Tris-HCl pH 6.8, 11.1% (v/v) glycerol, 2.15 % (v/v) SDS) at 70 °C for 5 min

**Application example**

20 - 1.25 µg of soluble proteins from senescing or young leaves of oilseed rape (*Brassica napus* L.) extracted with citrate sodium-phosphate buffer (100 mM, pH 6.8) and were separated on 12% SDS-PAGE and blotted 10 min to PVDF using semi-dry transfer (see Desclos et al. 2009). Blots were washed with TBS-T 3 times for 15 min at room temperature (RT) with agitation. Blot was incubated in the primary antibody at a dilution of 1: 2 000 (prepared in TBS-T with 5% low fat milk) for 2h or 1h30min at RT with agitation. The antibody solution was decanted and the blot was washed 5 times for 5 min in TBS-T and 3 times for 5 min in TBS at RT with agitation. Blot was incubated in secondary antibody (anti-rabbit IgG horse radish peroxidase conjugated) diluted to 1:0 000 in for 1h at RT with agitation. The blot was washed as above and developed for 5 min with ECL according to the manufacturer's instructions. Exposure time was 1 second.

in Brassica napus reveals the chronology of proteomics events associated with N remobilisation during leaf senescence induced by nitrate limitation or starvation. Proteomics 9, 3580-3608.
