

Product no **AS09 490****PIP2;2 | Plasma membrane aquaporin 2b****Product information**

<b>Immunogen</b>	KLH-conjugated synthetic peptide derived from N-terminal part of <i>Raphanus sativus</i> PAQ2b UniProt: <a href="#">Q9MB99</a>
<b>Host</b>	Rabbit
<b>Clonality</b>	Polyclonal
<b>Purity</b>	Serum
<b>Format</b>	Lyophilized
<b>Quantity</b>	100 µl
<b>Reconstitution</b>	For reconstitution add 100 µl of sterile water
<b>Storage</b>	Store lyophilized/reconstituted at -20°C; make aliquots to avoid repeated freeze-thaw cycles. Please remember to spin the tubes briefly prior to opening them to avoid any losses that might occur from material adhering to the cap or sides of the tube.
<b>Additional information</b>	0.1 % sodium azide is added as preservative. For antibody re-suspending information check the tube label.  Antibodies will detect target protein in a few µg of a crude preparation loaded per well. If purified preparations of vacuolar and plasma membranes are used, one µg load per well should be sufficient.

**Application information**

<b>Recommended dilution</b>	1 : 8000 (ELISA), 1 : 2000 (WB)
<b>Expected   apparent MW</b>	30   28 kDa ( <i>Raphanus sativus</i> )
<b>Confirmed reactivity</b>	<i>Arabidopsis thaliana</i> , <i>Fragaria ananassa</i> , <i>Raphanus sativus</i>
<b>Predicted reactivity</b>	<i>Brassica sp.</i> Species of your interest not listed? <a href="#">Contact us</a>
<b>Not reactive in</b>	No confirmed exceptions from predicted reactivity are currently known
<b>Additional information</b>	Protein or membrane sample should be treated at 70°C for 10 min before loading on the gel.  Antibody will weakly react with PIP2;1 and theoretically with PIP2;3, however this protein is very scarcely expressed in plant tissues. The mRNA content is 1 % of that for PIP2;2, therefore reactivity to PIP2;3 was negligible in our experiments.  Triton X-100 should not be included in the protein extraction buffer, when cell organelles or membrane proteins must be separated from soluble proteins. Because, Triton X breaks membrane structure and solubilizes most membranes proteins. Furthermore, it should be noted that Triton X at high concentrations binds SDS and mask the detergent effect of SDS for SDS-PAGE. Also, micelles of Triton X behave as a large complex with molecular mass of 90 kDa at high concentrations in SDS-PAGE.

**Application example**

**1 µg and 10 µg of crude membrane fraction/lane** from *Arabidopsis thaliana* were separated on 12 % **SDS-PAGE** and blotted 1h to **PVDF membrane** (40 min. at 10 V using BioRad semidry transfer). Filters were blocked 1h with 5 % low-fat **milk powder** in TBS-T (0.05% Triton X.100). Membranes were washed 5 times with TBS-T, each time in a fresh polystyrene box and probed with anti-PIP2;2 antibodies (AS09 490, **1:1000**, 1h) and secondary anti-rabbit (**1:2000**, 1 h). All steps were performed in RT with agitation.

PIP proteins usually show a faint band of dimeric form at 55 kDa addition to the major monomer band of 28 kDa even in the presence of SDS.
